has been known as the prison capital of the world, with eight-- soon to be nine--state prisons in the area and four federal facilities located 11 miles away in Florence. The first prison in Cañon City was built in 1868, before Colorado became a state, and was opened in 1871. Originally known as the Colorado Territorial Penitentiary, it is currently called the Colorado Territorial Correctional Facility and holds approximately 800 male inmates. Cañon City has grown up around the prisons, and the area's colorful history is defined by daring prison breaks, infamous inmates, such as the Colorado cannibal Alferd Packard, and by the stories of the inmates and employees who have been part of the prison system.

Part I: Process design -- Introduction to design -- Process flowsheet development -- Utilities and energy efficient design -- Process simulation -- Instrumentation and process control -- Materials of construction -- Capital cost estimating -- Estimating revenues and production costs -- Economic evaluation of projects -- Safety and loss prevention -- General site considerations -- Optimization in design -- Part II: Plant design -- Equipment selection, specification and design -- Design of pressure vessels -- Design of reactors and mixers -- Separation of fluids -- Separation columns (distillation, absorption and extraction) -- Specification and design of solids-handling equipment -- Heat transfer equipment -- Transport and storage of fluids.

"...this foundational volume on military neuropsychology should be on the bookshelf of every mental health clinician that may come in contact with military service members." --International Journal of Emergency Mental Health "...an important text dedicated to this subspecialty in the larger field of neuropsychology...The book integrates in a coherent manner the different aspects of military neuropsychological practice and provides a clear clinical road map for neuropsychologists and other psychologists working with military personnel in various settings."--PycCRITIQUES This text covers the unique features of neuropsychological evaluations in the military. The author presents a thorough examination of the assessment needs of various military populations, with a special emphasis on traumatic brain injury, and the neurocognitive aspects of stress-related problems, such as posttraumatic stress disorder (PTSD) and decision-making under stress. The chapters of the book are designed to integrate theory and application, and include case study examples as well as a comprehensive review of the latest research. Key Features: Discusses the development of neuropsychology and its advances in the military Presents methods of dealing with military issues, such as head injuries, HIV, PTSD, learning disorders, and more Explains the importance of baseline

testing, stress research, and multiple brain injury rehabilitation techniques

The first edition of conflict and catastrophe was produced in 2002 and a second, successful edition, followed in 2009. The decision to produce these works sprung from painful problems experienced by colleagues and authors themselves during many humanitarian and related deployments. The guide for both editions was to provide, in one volume, an entry level text covering all aspects of deployment, with an emphasis on medicine and healthcare in these environments. This third revised, expanded and updated edition of Conflict and Catastrophe Medicine: A Practical Guide follows its successful predecessors in providing a framework for use by health professionals visiting a resource constrained environment.

Encompassing problems brought about by local conflict or natural disasters, the book covers preparation, organisation, logistics, treatment of major trauma and medical emergencies, and the special problems of delivering medicine in a hostile environment. This book comprehensively tackles: Self-preparation of health professionals to face a range of medical and related problems which occur in hostile and remote environments; War and disaster medicine, covering acute management, rehabilitation, reconstruction and prevention; Bridging the fields of medicine, nursing, international relations, history, politics and economics. The book also touches on nutrition, infection, trauma, psychiatry and psychological medicine and training.

Examines the causes of the financial crisis that began in 2008 and reveals the weaknesses found in financial regulation, excessive borrowing, and breaches in accountability.

In the not-too-distant future, in what was once the old City of New York, megacorporations have taken over everything. Now even the internet is owned, and the only way to transmit sensitive

information is by a network of highly skilled couriers called “data runners” who run it over the sneakernet. It is a dangerous gig in a dirty world, but Jack Nill doesn’t have much choice in the matter. A brilliant young math whiz and champion of parkour, Jack must become one of these data runners in order to get his father out of a major gambling debt. When a mysterious stranger loads Jack’s chip with a cryptic cargo that everybody wants, he soon becomes the key figure in a conspiracy that could affect the entire North American Alliance. Now it’s all up to Jack. With the help of his best friend, Dexter, and a girl who runs under the name Red Tail, Jack will have to use all his skills to outrun the retrievers and uncover the truth before they catch him and clip him for good.
