A guide to advanced assessment and clinical diagnosis, this text is organized in a body systems framework and focuses on the adult patient. Each chapter focuses on a major problem associated with each particular body system.

This Handbook provides a contemporary and research-informed review of the topics essential to clinical psychological assessment and diagnosis. It outlines assessment issues that cross all methods, settings, and disorders, including (but not limited to) psychometric issues, diversity factors, ethical dilemmas, validity of patient presentation, psychological assessment in treatment, and report writing. These themes run throughout the volume as leading researchers summarize the empirical findings and technological advances in their area. With each chapter written by major experts in their respective fields, the text gives interpretive and practical guidance for using psychological measures for assessment and diagnosis.

Take your understanding to a whole new level with Pageburst digital books on VitalSource! Easy-to-use, interactive features let you make highlights, share notes, run instant topic searches, and so much more. Best of all, with Pageburst, you get flexible online, offline, and mobile access to all your digital books. Designed for advanced practice nurses and advanced practice nursing students, as well as Physician's Assistant students and practitioners, *Advanced Health Assessment & Clinical Diagnosis in Primary Care*, 4th Edition, is a practical resource that takes you to the "next step" of health assessment, beyond basic history and physical examination and through the diagnostic reasoning process. Accessible and concise, it approaches physical examination by focusing on a specific chief complaint rather than a diagnosis of a disease entity. Each chapter is organized into four major areas: Focused History; Focused Physical Examination; Laboratory and Diagnostic Studies; and Differential Diagnosis. Those who master the diagnostic reasoning process in this text will be able to accurately diagnose the majority of conditions they will see in clinical practice. Easy-to-follow format with consistent organization improves your ability to understand and accurately perform the different elements of the diagnostic reasoning process: Focused History sections walk you through the thinking process involved in obtaining a pertinent, relevant, problem-specific history that will assist in differential diagnosis. Key Questions highlight what questions to ask the patient, followed by an explanation of what the patient's responses might signify, to guide you toward an accurate assessment and precise diagnosis. Focused Physical Examination sections explain how to conduct more advanced diagnostic techniques and offer interpretations of the findings. Laboratory and Diagnostic Studies sections give a brief outline of what types of laboratory or diagnostic studies would be appropriate for the chief complaint or suspected diagnosis. Differential Diagnosis sections contain the most common differential diagnoses for each chief complaint and summarize the history and physical examination findings, along with the laboratory and diagnostic studies indicated. Differential Diagnosis tables offer an at-a-glance summary of possible diagnoses. Reordered table of contents, organized alphabetically by patient problem rather than by body system, simplifies and accelerates information retrieval. A list of chapters by body system is also included for reference. Three new chapters: Chapter 23: Palpitations Chapter 36: Weight Loss/Gain (Unintentional) Chapter 38: The Abdominal X-ray Additional Evidence-Based Practice boxes provide additional research-based tips on conducting the most effective exams for more accurate diagnoses.

In the ongoing quest to improve our psychiatric diagnostic system, we are now searching for new approaches to understanding the etiological and pathophysiological mechanisms that can improve the validity of our diagnoses and the consequent power of our preventive and treatment interventions -- venturing beyond the current DSM paradigm and DSM-IV framework. This thought-provoking volume -- produced as a partnership between the American Psychiatric Association, the National Institute of Mental Health, the National Institute on Alcohol Abuse and Alcoholism, and the National Institute on Drug Abuse -- represents a far-reaching attempt to stimulate research and discussion in the field in preparation for the eventual start of the DSM-V process, still several years hence. The book Explores a variety of basic nomenclature issues, including the desirability of rating the quality and quantity of information available to support the different disorders in the DSM in order to indicate the disparity of empirical support across the diagnostic system. Offers a neuroscience research agenda to guide development of a pathophysiologically based classification for DSM-V, which reviews genetic, brain imaging, postmortem, and animal model research and includes strategic insights for a new research agenda. Presents highlights of recent progress in developmental neuroscience, genetics, psychology, psychopathology, and epidemiology, using a bioecological perspective to focus on the first two decades of life, when rapid changes in behavior, emotion and cognition occur. Discusses how to address two important gaps in the current DSM-IV: (1) the categorical method of diagnosing personality disorders and their relationship with Axis I disorders, and (2) the limited provision for the diagnosis of relational disorders -- suggesting a research agenda for personality disorders that considers replacing the current categorical approach with a dimensional classification of personality. Reevaluates the relationship between mental disorders and disability, asserting that research into disability and impairment would benefit from the diagnosis of mental disorders be uncoupled from a requirement for impairment or disability to foster a more vigorous research agenda on the etiologies, courses, and treatment of mental disorders as well as disabilities and to avert unintended consequences of delayed diagnosis and treatment. Examines the importance of culture in psychopathology and the main cultural variables at play in the diagnostic process, stating that training present and future professionals in the need to include cultural factors in the diagnostic process is a logical step in any attempt to develop comprehensive research programs in psychology, psychiatry, and related disciplines. This fascinating work, with contributions from an international group of research investigators, reaches into the core of psychiatry, providing invaluable background and insights for all psychology and psychiatry professionals -- food for thought and further research that will be relevant for years to come.

From leading authorities, this book presents evidence-based strategies for using multimethod assessment to enhance clinical practice. The volume is organized around key assessment targets in the areas of personality, psychopathology, and clinical management (for example, treatment planning and progress monitoring). Each chapter presents multiple methods that are particularly useful for assessing the issue at hand, provides a framework for using these methods together, and reviews the empirical data supporting their integration. Illustrative case examples clarify the approaches described and show how incorporating assessment into treatment can strengthen the therapeutic relationship.

This second edition has been improved and expanded based on readers feedback. Chris Breen is a Registered Nurse who served with the RAMC, a Paramedic and Clinical Tutor with additional qualifications in Trauma and Remote Medicine. He has had a long term interest in emergency medicine and is the Medical Advisor for a Preparedness group and runs courses in Survival Medicine. Craig Ellis is a Medical doctor who trained as a Specialist Emergency Physician. He has a special interest in austere medicine and medical practice during prolonged disasters. He has both worked and taught austere medical practice. The contents of this book are derived from a number of articles which have been published online and the syllabus of Course they run. Its aim is to provide key information on Clinical Assessment and Diagnosis in an understandable way, suitable for both beginners and Experienced practitioners. In addition to detailed medical and trauma assessments, explanations of common diseases and conditions at provided with signs and symptoms. Red flag indicators for each body system and individual conditions are also detailed. INTRODUCTION CHAPTER 1 EXAMINATION OF PATIENTS CHAPTER 2 FRACTURES CHAPTER 3 SPINAL TRAUMA CHAPTER 4 DISLOCATIONS CHAPTER 5 WOUNDS AND BURNS CHAPTER 6 HEAD, CHEST AND ABDOMINAL TRAUMA CHAPTER 7 ROAD TRAFFIC COLLISIONS (RTCS) CHAPTER 8 JOINTS, MUSCLES, TENDONS AND LIGAMENTS CHAPTER 9 ALLERGIC REACTION CHAPTER 10 RESPIRATORY ILLNESSES CHAPTER 11 ABDOMINAL ILLNESSES CHAPTER 12 NEUROLOGICAL PROBLEMS CHAPTER 13 CIRCULATORY PROBLEMS CHAPTER 14 DIABETES CHAPTER 15 POISONING CHAPTER 16 SHOCK CHAPTER 17 EAR, NOSE AND THROAT (ENT) CHAPTER 18 EYE PROBLEMS CHAPTER 19 SKIN CONDITIONS CHAPTER 20 MINOR MEDICAL PROBLEMS CHAPTER 21 MEDICATION CHAPTER 22 VACCINES (IMMUNISATION) CHAPTER 23 ENVIRONMENTAL PROBLEMS CHAPTER 24 BITES, STINGS AND PARASITES CHAPTER 25 CLINICAL OBSERVATIONS &TESTS CHAPTER 26 DENTAL PROBLEMS CHAPTER 27 SEXUALLY TRANSMITTED DISEASES CHAPTER 28 OBSTETRICS AND GYNAECOLOGY CHAPTER 29 INFECTIOUS DISEASES, NUCLEAR BIOLOGICAL & NERVE AGENT WARFARE CHAPTER 30 GUNSHOT WOUNDS, EXPLOSIONS & TACTICAL CONSIDERATIONS CHAPTER 31 TRIAGE CHAPTER 32 NUTRITION CHAPTER 33 PSYCHOLOGICAL PROBLEMS CHAPTER 34 ECG INTERPRETATION APPENDIX 1 GCS APPENDIX 2 MEDICAL TERMINOLOGY APPENDIX 3 FURTHER READING INDEX

This revolutionary, user-friendly textbook not only guides social workers in developing competence in the DSM system of diagnosis, it also assists them in staying attuned during client assessment to social work values and principles: a focus on client strengths, concern for the worth and dignity of individuals, appreciation of environmental influences on behavior, and commitment to evidence-informed practice. The authors, seasoned practitioner-scholars, provide an in-depth exploration of fourteen major mental disorders that social workers commonly see in practice, including anxiety disorders, depression, bipolar disorder, and schizophrenia. They skillfully integrate several perspectives in order to help practitioners meet the challenges they will face in client assessment. A risk and resilience framework helps social workers understand environmental influences on the emergence of mental disorders and the strengths that clients already possess. Social workers will also learn to apply critical thinking to the DSM when it is inconsistent with social work values and principles. Finally, the authors catalog the latest evidence-based assessment instruments and treatments for each disorder so that social workers can intervene efficiently and effectively, using the best resources available. Students and practitioners alike will appreciate the wealth of case examples, evidence-based assessment instruments, treatment plans, and new social diversity sections that make this an essential guide to the assessment and diagnostic processes in social work practice.

Clinical Interviewing, Fifth Edition blends a personal and easy-to-read style with a unique emphasis on both the scientific basis and interpersonal aspects of mental health interviewing. It guides clinicians through elementary listening and counseling skills onward to more advanced, complex clinical assessment processes, such as intake interviewing, mental status examination, and suicide assessment. Fully revised, the fifth edition shines a brighter spotlight on the development of a multicultural orientation, the three principles of multicultural competency, collaborative goal-setting, the nature and process of working in crisis situations, and other key topics that will prepare you to enter your field with confidence, competence, and sensitivity.

Widely used by practitioners, researchers, and students--and now thoroughly revised with 70% new material--this is the most authoritative, comprehensive book on malingering and other response styles. Leading experts translate state-of-the-art research into clear, usable strategies for detecting intentional distortions in a wide range of psychological and psychiatric evaluation contexts, including forensic settings. The book examines dissimulation across multiple domains: mental disorders, cognitive impairments, and medical complaints. It describes and critically evaluates evidence-based applications of multiscale inventories, other psychological measures, and specialized methods. Applications are discussed for specific populations, such as sex offenders, children and adolescents, and law enforcement personnel. New to This Edition
*Many new authors and topics. *Thoroughly updated with current data, research methods, and assessment strategies. *Chapters on neuropsychological models, culturally competent assessments, psychopathy, and conversion disorder. *Chapters on psychological testing in child custody cases and in personnel selection/hiring.
