- Full colour interleaved Teacher's book- Full support on every section of the Students' book- Answers justification for reading and listening parts - Practical notes for using the interactive whiteboard software - Extra quizzes - Extra speaking practice and extra writing practice with models - CLIL support (Content and Language Integrated Learning) exercises - Support on using the Active Teach IWB software in class. ActiveTeach is everything a teacher needs in the classroom on one disc.

Cosmic uses technology to communicate through weblinks, blogs and educational games. Students enjoy learning in a fascinatingly familiar environment. Cosmic offers the perfect platform for teenagers to investigate, solve and report ...with one clear focus on one final goal - exam success

The treatise De mundo offers a cosmology in the Peripatetic tradition which subordinates what happens in the cosmos to the might of an omnipotent god. Thus the work is paradigmatic for the philosophical and religious concepts of the early imperial age, which offer points of contact with nascent Christianity.

Raymond Murphy's English Grammar in Use is the first choice for intermediate (B1-B2) learners and covers all the grammar you will need at this level. This book without answers has clear explanations and practice exercises that have helped millions of people around the world improve their English. It is perfect for teachers to use in the classroom as a supplementary book, for extension work, or for homework activities.

Table of contents

This book represents the results of 45 years of research on a wide range of topics, including atomic physics, single-molecule enzymology, whole-cell metabolism, physiology, pharmacology, linguistics, semiotics, and cosmology. It describes the first comprehensive molecular theory of the genotype-phenotype coupling based on two key theoretical concepts: (i) the conformon, the conformational wave packet in biopolymers carrying both the free energy and genetic information; and (ii) the intracellular dissipative structures, the chemical concentration waves inside the cell that serve as the immediate drivers of all cell functions. Conformons provide the driving forces for all molecular machines in the cell, and intracellular dissipative structures coordinate intra- and intercellular processes such as gene expression and cell-cell communications. One of the predictions made by the cell language theory (CLT) is that there are two forms of genetic information – the Watson-Crick genes transmitting information in time (identified with DNA), and the Prigoginian genes transmitting information in space (identified with RNA expression profiles). The former is analogous to sheet music or written language and the latter is akin to audio music or spoken language, both being coupled by conformons acting as the analog of the pianist. The new theory of DNA structure and function constructed on the basis of CLT can rationally account for most of the puzzling findings recently unearthed by the ENCODE (Encyclopedia of DNA Elements) project. The Cell Language Theory has important applications in biomedical sciences including drug discovery research and personalized medicine on the one hand and in the mind-body research and consciousness studies on the other.
