The main idea is to think of voting methods as solutions to an optimization problem. Consider the space of all rankings of the alternatives  $\setminus(X)$ . Given a profile of rankings, the voting problem is to find an “optimal” group ranking (cf. the discussion or distance-based rationalizations of voting methods from Elkind et al. 2015).

Capitalism drives our global food system. Everyone who wants to end hunger, who wants to eat good, clean, healthy food, needs to understand capitalism. This book will help do that. In his latest book, Eric Holt-Giménez takes on the social, environmental, and economic crises of the capitalist mode of food production. Drawing from classical and modern analyses, *A Foodie's Guide to Capitalism* introduces the reader to the history of our food system and to

the basics of capitalism. In straightforward prose, Holt-Giménez explains the political economics of why—even as local, organic, and gourmet food have spread around the world—billions go hungry in the midst of abundance; why obesity is a global epidemic; and why land-grabbing, global warming, and environmental pollution are increasing. Holt-Giménez offers emblematic accounts—and critiques—of past and present-day struggles to change the food system, from "voting with your fork," to land occupations. We learn about the potential and the pitfalls of organic and community-supported agriculture, certified fair trade, microfinance, land trusts, agrarian reform,

cooperatives, and food aid. We also learn about the convergence of growing social movements using the food system to challenge capitalism. How did racism, classism, and patriarchy become structural components of our food system? Why is a rational agriculture incompatible with the global food regime? Can transforming our food system transform capitalism? These are questions that can only be addressed by first understanding how capitalism works.

important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic

### Solutions community. The benefits

of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a

The ARML (American Regions Math League) Power Contest is truly a unique competition in which a team of students is judged on its ability to discover a pattern, express the pattern in precise mathematical language, and provide a logical proof of its conjectures. Just as a team of students can be self-directed to solve each problem set, a teacher, math team coach, or math circle leader could take these ideas and questions and lead students into problem

### Solutions and mathematical discovery.

This book contains thirty-seven interesting and engaging problem sets from the ARML Power Contests from 1994 to 2013. They are generally extensions of the high school mathematics classroom and often connect two remote areas of mathematics. Additionally, they provide meaningful problem situations for both the novice and the veteran mathlete. Thomas Kilkelly has been a mathematics teacher for forty-three years. During that time he has been awarded several teaching honors and has coached many math teams to state and national championships. He has always been an advocate for more discovery, integration, and
