The book is about technical information on popular crop loan scheme within agriculture finance of bank. The crop loan scheme is well known as Kisan Credit Card; this book contains information which is not available in banking domain as of now. The reference base will be useful for sourcing, appraising, monitoring and development of KCC portfolio of the bank. The book aims at providing information which will help rural banker in understanding farm, farmer, crop and its management. This understanding will help in providing timely and need based credit to large section of farmer, thus will be contribution towards doubling of farmer's income initiative of government. The book aims to provide new outlook towards KCC by banker and change their role to financier/advisor to banker rather than lender. It further brings out the opportunities available for making KCC banking as profitable venture for commercial banks in India.

The boom elevator on potato harvesters elevates and delivers the potatoes into a bulk transport vehicle. On present harvesters the height of fall of the potatoes is adjusted manually. Due to inexperience, fatigue or poor judgement by the operator, drop heights are usually too great to handle the potatoes without damage. The economic loss to the potato industry from mechanical injury to potatoes amounts to millions of dollars each year. An automatic boom height control would help to maintain proper drop heights in relation to the pile formation during loading of the truck and thus reduce potato damage. A considerable reduction in mechanical damage to potatoes can be achieved by coordinating various conveyor speeds on the harvester with the forward speed and the potato yield. Speed adjustment of the conveyors can be achieved using a variable speed hydraulic drive system. Design data for hydraulic drives would help interested farmers and manufacturers to incorporate this system on potato harvesters. An electrohydraulic automatic boom height control was designed and fabricated. The system was mounted on a Lockwood Mark 76 potato harvester. The modified potato harvester was tested for correct functioning of the automatic boom height control operating both independently from and simultaneously with manual control of the boom height...

"In this thoroughly researched and beautifully written biography, Jill Norgren traces Belva Lockwood's dogged efforts to earn a living as a lawyer in Washington while caring for her daughter and becoming a leading advocate for women's suffrage and the peaceful arbitration of international disputes. Norgren's brilliant study makes clear why Lockwood--the first woman to argue before the Supreme Court (1879) and run for President (1884 and 1888)--belongs in the ranks of Susan B. Anthony, Elizabeth Cady Stanton, and Frances Willard." --John M. Ferren, author of Salt of the Earth, Conscience of the Court: the Story of Justice Wiley Rutledge "In this meticulously researched and moving account, Professor Norgren has rescued Lockwood's extraordinary story from relative obscurity. Like Shakespeare's Portia, Lockwood used wit, ingenuity, and sheer force of will to unsettle society's conceptions of her sex. The author deserves high commendation for recognizing Lockwood's rightful place in United States history by writing this biography." --Ruth Bader Ginsburg, Associate Justice, Supreme Court of the United States "Jill Norgren beautifully weaves the personal and political ordeals of Belva Lockwood's life into a compelling story that illuminates Lockwood's enduring contributions. This is a dramatic account a pioneering woman whose life in the law still resonates in contemporary times." --Joan Biskupic, author of Sandra Day O'Connor: How the First Woman on the Supreme Court Became Its Most Influential Justice "Jill Norgren's splendid biography of one of history's most astonishing pioneers--first woman counsel before the Supreme Court, visionary for equal rights, international peace activist, Indian rights litigator, presidential candidate--is provocative, challenging, galvanizing! Brilliantly researched, vividly written, and profou

The origins of this book are in my first attempts to understand psychology as a post-war student in the Cambridge of the late 1940s. Sir Frederic Bartlett and his colleagues in the Psychology Department were talking and writing about the concept of the skill as the fundamental unit of behaviour. This made entire sense to me but not apparently to very many other people because the movement dwindled rapidly with the retirement of Sir Frederic in 1952. It got lost within performance studies which were essentially behaviouristic and stimulus-response in origin, a quite different style of thinking from the gestalt approach of skill psychology. This is not a simple dichotomy of course and skill psychology does go some way towards the analytic approach in accepting that a science needs to have a basic element, a unit from which the complexities of real behaviour can be constructed. into which it can be analysed and in terms of which it can be described and understood. The trick is to pick the right unit and I think that skills is an appropriate unit for human behaviour. Note the plural, although these units are elements they are not identical any more than the ninety-odd elements of the physical world are identical. The issue is sometimes clarified by considering the analogy with the attempt to describe a house. The simplest observable elements here are the brick, the piece of stone or the piece of wood.
