Magic Squares Square Answers - Orris

The square of Varahamihira as given above has sum of 18. Here the numbers 1 to 8 appear twice in the square. It is a pan-diagonal magic square.It is also an instance of most perfect magic square.Four different magic squares can be obtained by adding 8 to one of the two sets of 1 to 8 sequence.

Magic square - Wikipedia

They are sometimes known as \"normal\" magic squares. The magic number for each square is shown under the square. For example, the magic number for the \"normal\" 3-by-3 magic square is M 3-by-3 = 15 = 3 x 5. Look carefully at the magic squares and then predict the magic number for a 9-by-9 \"normal\" magic square. Explain your reasoning.
