Essential care for horses hoofs | Blue Cross

Corrective shoeing is an art, and a good farrier can help horses with issues ranging from a sole bruise that is helped by a padded shoe or special angle work to pads to make a horse with conformational issues feel more comfortable. Remember that the work you ask of your horse may also influence a decision about shoeing or going barefoot.

The Barefoot vs. Shod Debate - Horse Health Products

"Hot shoeing," also called "hot setting" or "hot fitting," is a common practice among farriers. After the foot has been trimmed, rasped and is ready for the new shoe, the farrier will heat the shoe in the forge and place it briefly on the foot to sear the path where the shoe will ultimately lie.

The Basics of Hot Shoeing - The Horse Owner's Resource

Historically, horses were shod to reduce the surface wear on their hooves and to protect the feet from contact with hard ground when being used for pulling or riding. The shoeing of horses allowed them to be used for longer periods of time and over more varied footing than would otherwise be possible.
