Walnuts - Cooperative Extension San Joaquin County

Harvesting in Walnut Farming:-Usually, walnut trees will become ready for harvesting in 10 to 12 years after planting the seedlings. One can expect full commercial production after 18 to 20 years from planting time. However, grafted planting starts early fruit bearing (in 4 to 5 years after planting). In grafted plantation, full commercial production should start in 8 to 10 years.

Walnut production manual (Book, 1997) [WorldCat.org]

The following manual on Best Practice Management for Establishing a Walnut Orchard was compiled by the author from his own publications and from other published literature. The manual does not describe all management systems available. The author has attempted to select, in his opinion, the best options at the time of writing.

BEST PRACTICE MANAGEMENT FOR ESTABLISHING A WALNUT ORCHARD

Irrigation Scheduling for Walnut Orchards DAVID A. GOLDHAMER In most areas of California, a mature walnut orchard has the potential to use about 42 acre-inches of water per acre. This equates to about 290 gallons of water for each pound of nuts produced in a 2-ton orchard. Inadequate irrigation of walnut trees can result in

Irrigation Scheduling for Walnut Orchards

California in the US is the country's top walnut producing state. In fact, the state accounts for nearly all the walnut production of the US. The Sacramento and San Joaquin Valley regions in California are famous for walnut production. Nearly 4,900 farmers in California grow walnuts. In 2016/17, the US produced 607,810 metric tons of walnut.
